Summary of requirement gathering process

Hi. I'm doing a software project for web-based Transport system(like uber).
Can you help with that?

Project Discussion Bot - Year2

Hi! Yes, I can help you with your project. That sounds interesting — a web-based transport system like Uber.

Before we start, can you please tell me a few things?

1. What is the name of your project?
2. Who will use this system? (For example: drivers, passengers, admin)
3. Is it a website, mobile app, or both?
4. What can users do with your system?

Once I know these details, I'll create some client personas for you to talk to. Let's build this together! 😊

1Web-based Transport System(like uber)
2drivers, passengers, admin
3Web-based
4 register, booking rides, see traffic data,drivers can login and find costumers, use map as guide, payment details and options, rate and review, safety features

Project Discussion Bot - Year2

Great, thank you! Let's begin.

Your project is called **Web-based Transport System**. It is like Uber, and it will be used by **drivers, passengers, and admins**. It is a **website**, not a mobile app. Users can register, book rides, see traffic, use maps, make payments, rate drivers, and use safety features.

Now I will create a company and 5 people from that company who will help you with your project.

Company Name: *LankaRide Services Pvt Ltd*

About the Company: LankaRide is a local transport company in Sri Lanka. They want to build a web system to help passengers book rides easily and help drivers find customers. They also want to make sure the system is safe and easy to use.

Here are 5 people from LankaRide who will talk to you:

1. **Mr. Nuwan Perera** – Operations Manager
2. **Ms. Shanika Silva** – Customer Support Officer
3. **Mr. Roshan Jayasuriya** – Senior Driver
4. **Ms. Dilani Fernando** – Marketing Executive
5. **Mr. Tharindu Wickrama** – IT Assistant

You can now ask questions about your project. I will choose the right person to answer you. You can also say "next" to meet another person. 😊

what kind of operations will there be? how it's going to be beneficial for the customer and drivers

Project Discussion Bot - Year2

👋 Hello! I'm Mr. Nuwan Perera, Operations Manager at *LankaRide Services Pvt Ltd*. We are building this new **Web-based Transport System** to make travel easier for everyone in Sri Lanka.

In our system, there will be many operations. Passengers can book rides, check traffic, and make payments. Drivers can find customers, use maps, and see how much they earn. Admins will manage users, check reports, and keep everything safe.

This system helps passengers by saving time and giving safe rides. It helps drivers by giving more jobs and easy ways to earn money. We want it to be simple and useful for all.

Would you like to ask more about how drivers or passengers will use it? 😊

I wanna talk with Mr. Nuwan Perera

Project Discussion Bot - Year2

👋 Hello again! I'm **Mr. Nuwan Perera**, Operations Manager at *LankaRide Services Pvt Ltd*. Thank you for wanting to talk with me.

Let me explain simply.

In our transport system, we will manage many things like:

- Ride bookings
- Driver schedules
- Payments
- Safety checks
- Customer support

This system helps **passengers** by giving fast, safe, and easy rides. They can book from home, see traffic, and pay online.

It helps **drivers** by showing nearby customers, giving route maps, and showing how much they earn. They don't need to wait on the road.

I want to talk with Ms. Shanika Silva

Project Discussion Bot - Year2

👋 Hello! I'm **Ms. Shanika Silva**, Customer Support Officer at *LankaRide Services Pvt Ltd*. Nice to meet you!

I work closely with passengers every day. This new transport system will help us give better service. Passengers can book rides easily, see driver details, and feel safe. If they have problems, we can help them quickly through the system.

Drivers will also benefit. They can find passengers faster, get paid easily, and receive reviews to improve their service.

Would you like to know how we handle complaints or safety features? 😊

How should customer support handle ride cancellation requests?

Project Discussion Bot - Year2

👋 Hello! I'm **Ms. Shanika Silva**, Customer Support Officer at *LankaRide Services Pvt Ltd*. I'm happy to help you.

When a passenger wants to cancel a ride, we follow a simple process. First, they click "Cancel" on the website. Then, our system checks if the driver has already started the trip. If not, the ride is cancelled and the passenger may get a refund.

If the driver is already on the way, we check the reason. Sometimes a small fee is charged. We also send a message to the driver so they don't waste time.

If the passenger has a problem, they can contact us through chat or call. We help them quickly and politely.

Would you like to know how we handle refunds or complaints? 😊

yes, I will

Project Discussion Bot - Year2

👋 Hello again! I'm **Ms. Shanika Silva**, Customer Support Officer at *LankaRide Services Pvt Ltd*. Let me explain how we handle **refunds and complaints** in our system.

If a passenger cancels a ride and is eligible for a refund, the system will show the refund amount. It will be sent to their account or wallet within a few days. If there is a problem, they can contact us through chat or phone.

For complaints, passengers can fill a form or send a message. We check the issue, talk to the driver if needed, and reply quickly. We always try to solve problems in a fair and friendly way.

Would you like to know how we check driver behaviour or safety issues? 😊

I want to talk with Mr. Roshan Jayasuriya

Project Discussion Bot - Year2

👋 Hello! I'm **Mr. Roshan Jayasuriya**, Senior Driver at *LankaRide Services Pvt Ltd*. Nice to meet you!

As a driver, I think this new system will help us a lot. We can see nearby passengers, use maps to find places, and get paid faster. It also shows traffic, so we can avoid busy roads.

If a passenger cancels a ride, I want the system to tell me quickly. That way, I don't waste time or fuel. I also want to see my earnings clearly and get reviews from passengers.

Do you want to ask me about how drivers accept rides or use the map? 😊

yes I want

Project Discussion Bot - Year2

👋 Hello! I'm **Mr. Roshan Jayasuriya**, Senior Driver at *LankaRide Services Pvt Ltd*. Let me explain how drivers use the system to accept rides and use the map.

When I log in, I see a list of nearby ride requests. I can tap "Accept" to take a ride. Then the system shows me the passenger's location and the best route using the map.

The map helps me avoid traffic and reach the passenger fast. It also shows the drop-off point clearly. I like that I don't need to ask for directions — the system guides me.

Would you like to know how I check my earnings or how I rate passengers? 😊

how do you rate passengers

Project Discussion Bot - Year2

👋 Hello! I'm **Mr. Roshan Jayasuriya**, Senior Driver at *LankaRide Services Pvt Ltd*. Let me explain how I rate passengers.

After each ride, the system shows me a screen with stars — from 1 to 5. I choose how many stars based on how the passenger behaved. If they were polite, ready on time, and followed safety rules, I give 5 stars. If there was a problem, I give fewer stars and write a short comment.

This helps other drivers know what to expect. It also helps the company improve service.

Would you like to know how I check my earnings or how I get new ride requests? 😊

I want to talk with Marketing Executive Ms. Dilani Fernando

Project Discussion Bot - Year2

Hello! I'm **Ms. Dilani Fernando**, Marketing Executive at *LankaRide Services Pvt Ltd*. I'm happy to talk with you!

In marketing, we want more people to use our transport system. So, we focus on things like promotions, discounts, and making the website easy to understand. We also collect feedback from passengers to improve our service.

We want the system to look modern and friendly. It should work well on phones too, because many people use mobile browsers.

Would you like to ask about how we promote the service or how we collect customer feedback? 😊

how do you collect and use customer feedback

Project Discussion Bot - Year2

Hello! I'm **Ms. Dilani Fernando**, Marketing Executive at *LankaRide Services Pvt Ltd*. I'm happy to explain how we collect and use customer feedback.

After each ride, passengers can rate the service and write a short comment. We also send small surveys by email or show them on the website. If someone gives a low rating, we check it quickly and try to fix the issue.

We use this feedback to improve our service, train drivers better, and make the website easier to use. Good feedback helps us know what passengers like. Bad feedback helps us know what to change.

Would you like to ask how we promote the system to new users? 😊

I want to talk with Mr. Tharindu Wickrama

Project Discussion Bot - Year2

Hello! I'm **Mr. Tharindu Wickrama**, IT Assistant at *LankaRide Services Pvt Ltd*. I help with the technical side of our transport system.

We want the system to be fast, simple, and safe. It should work well on all browsers and show live traffic and maps. Drivers and passengers must be able to log in easily and use all features without problems.

If something goes wrong, I help fix it. I also test new updates before we add them to the system.

Would you like to ask about how we keep the system secure or how we test new features? 😊

how do you keep user data safe

Project Discussion Bot - Year2

👋 Hello! I'm **Mr. Tharindu Wickrama**, IT Assistant at *LankaRide Services Pvt Ltd*. Thank you for asking about user data safety — it's very important.

We keep user data safe by using **secure login**, **strong passwords**, and **data encryption**. That means no one can see or steal personal details like names, phone numbers, or payment info. We also check the system often to make sure there are no bugs or problems.

If someone tries to hack or misuse the system, we block them and report it.

Would you like to ask how we test the system before launching it? 😊

how do you test the system before launch

Project Discussion Bot - Year2

👋 Hello! I'm **Mr. Tharindu Wickrama**, IT Assistant at *LankaRide Services Pvt Ltd*. Let me explain how we test the system before launching it.

First, we check every feature one by one — like login, booking, maps, and payments. We use test accounts to act like real passengers and drivers. If something doesn't work, we fix it before going live.

We also ask a few staff members to try the system and give feedback. This helps us make sure everything is smooth and easy to use.

Would you like to ask how we update the system after launch? 😊

Identified users and their roles

1. Operations Manager

- Oversee daily operations to ensure everything runs smoothly.
- Manage teams, resources, and budgets.
- Improve efficiency and productivity.

2. Customer Support Officer

- Assist customers with questions or issues.
- Provides solutions via phone, email, or chat.
- Ensures customer satisfaction and resolves complaints.

3. Senior Driver

- Drives safely and efficiently, often in charge of more complex routes.
- Supervises junior drivers and maintains vehicles.
- Delivers goods or transports passengers on time.

4. Marketing Executive

- Creates and manages marketing campaigns to promote products.
- Research market trends and customer needs.
- Analyzes results to improve future campaigns.

5. IT Assistant

- Provides tech support and troubleshooting.
- Maintains hardware, software, and systems.
- Help with IT setup, security, and backups.

Six core functions of the system

1. User Registration and Profile Management

- Allows users to create accounts, update personal details, and manage their profile settings securely.

Sub-functions:

- Account creation with basic details (name, contact, payment method).
- Profile editing for drivers (vehicle info, driving history, ratings).
- Password recovery and security settings.

2. Ride Booking and Scheduling

- Enables users to book rides, choose pickup and drop-off locations, and schedule trips in advance.

Sub-functions:

- Location Selection (Lets users choose pickup and drop-off points using maps or manual input)
- Ride type and time selections (Allows users to select vehicle type and schedule rides for immediate or future times)
- Fare estimation (Provides an estimated cost for the ride based on distance, time, and selected options)

3. Ride Tracking and Notifications

- Provides real-time ride location updates and sends timely alerts about ride status, driver arrival, and trip progress.

Sub-functions:

- GPS tracking for live updates on driver location.
- Push notifications for ride status (driver end route, completed).
- In-app ride details, including driver and vehicle info.

4. Driver Assignment and Management

- Handles assigning drivers to ride requests and manages driver profiles, availability, and performance tracking.

Sub-functions:

- Driver availability management (online, offline, or busy).

- Driver profile management (Allows drivers to update their personal details, vehicle information, and availability status)
- Performance Monitoring

5. Payment Processing and Invoice Generation

- Facilitates secure payment transactions and automatically generates detailed invoices for completed rides.

Sub-functions:

- Multiple payment options (credit cards, e-wallets).
- Invoice generation and ride history for customers and drivers.
- Secure Transaction handling (ensures safe and encrypted processing)

6. Ratings and Feedback System

- Allow users to rate rides and provide feedback to improve service quality and driver performance.

Sub-functions:

- Rating system for drivers and customers.
- Option to provide feedback
